

DATANO

ODATA FOR CARDANO

OData V4 API for Cardano

Project Close-Out · Catalyst Fund 14 · #1400109

Maximilian Weber · November 2025 – April 2026

Two different worlds one Interface

SAP ecosystem

- 400,000+ enterprise customers
- 77% of global transaction revenue
- OData V4 is the native protocol

Cardano blockchain

- Custom APIs, CBOR, UTXO model
- Months of learning per developer
- No standard enterprise connector

ODATANO bridges these worlds and offers standardised OData responses and actions

As Service or per Cloud Application Plugin

01

Standard OData V4

29 CDS entities, 15 read actions, 8 transaction actions — all OASIS/ISO standard.

02

Multi-backend

Blockfrost · Koios · Ogmios with automatic failover and TTL cache.

03

SAP-native

Built on SAP CAP. Deploys to BTP Cloud Foundry. XSUAA auth. HSM signing.

04

Zero blockchain knowledge

SAP developers write GET requests. ODATANO handles CBOR, UTXO, fees, coin selection.

```
npm install @odatano/core
```

From SAP to Cardano in one call

Three milestones, one product

JANUARY 2026

Read Operations

18 entities · 15 read actions ·
multi-backend failover · lazy
indexing · 340 tests · 96%
coverage.

FEBRUARY 2026

Transaction Building

Build → Sign → Submit · ADA +
native assets · dual builder · Plutus
V3 mint/spend · 740 tests · 97%
coverage.

MARCH 2026

Signing & Wallets

CIP-30 · CLI · HSM via PKCS#11 ·
Fiori Wallet Viewer · 8 ABAP
classes · 1,285 tests · 99%
coverage.

What enterprises can build today

1

Audit & Compliance

Query transaction history, metadata, and block confirmations via standard OData filters.

2

Supply Chain Tracking

Mint NFTs with inline datums, transfer custody with Plutus spend validators. See TRACE demo.

3

Sustainability Reporting

Track on-chain carbon credit tokens, query asset holdings by address.

4

Payment Processing

Build, sign, and submit ADA or native token transfers from SAP workflows in three calls.

5

SAP ERP Integration

ABAP classes for direct Cardano access from on-premise SAP systems, no middleware.

A transaction lookup is now just another GET request.

Transaction building is just as easy as calling any other Odata Action

No raw CBOR. No complex UTXO handling. No custom SDK. Just OData - the protocol ERPs speak natively

Open source, ready to use & try

Example USE CASE

TRACE Supply Chain on Cardano

Any OData client can consume it today. SAP, Microsoft, Salesforce, custom.

Thank you, Cardano for making this possible

Enterprise adoption of Cardano starts with speaking enterprise protocols.
